

CIP Project Summary

Villagio/Estero Pkwy Drainage Improvements

CIP Category: Stormwater

Design :	\$	216,000.00
Construction :	\$	1,411,200.00
Total:	\$	1,627,200.00

Project Description:

Improve drainage around Villagio south of Estero Parkway to better distribute flows to the two sets of box culverts under Three Oaks Parkway.

Project Justification:

Observations after Hurricane Irma and the Stormwater Master Plan indicate water is not evenly distributed between the two sets of culverts under Three Oaks Parkway. The majority of the flow is directed to the southern culverts due to the better conveyance through the Villagio ditch. Better distributing flow should improve drainage and reduce flooding.
