

CIP Project Summary

Villages at Country Creek Bypass

CIP Category: Stormwater

Design :	\$	192,000.00
Construction :	\$	501,600.00
Total:	\$	693,600.00

Project Description:

Modify the swale around Villages at County Creek to increase the amount of water that flows around the community and bypasses the relative narrow section of the Estero River that runs through the community.

Project Justification:

The Village's Stormwater Master Plan identified a constriction of flow within the North Branch of the Estero River through Village at Country Creek. Increasing the flow around the community should reduce flooding within the community and upstream of the community. It will also provide increased capacity to allow other upstream improvements to be implemented.
